

COVID-19 Weekly Epidemiological Update

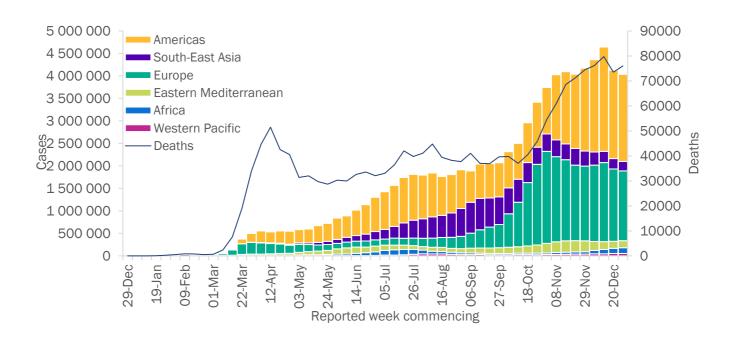

Data as received by WHO from national authorities, as of 3 January 2021, 10 am CET For the latest data and information on COVID-19, please see:

- WHO COVID-19 Dashboard
- WHO COVID-19 Weekly Operational Update

Global epidemiological situation

For the third week in a row over 4 million new cases were reported globally, although this week saw a slight decrease compared to the previous week. However, this and other short-term trends in data should be interpreted with caution owing to the end-of-year holiday season, as numbers may be influenced by presentation, testing and reporting delays. The decrease seen last week in new deaths has been reversed with deaths rising by 3% to 76 000 (Figure 1, Table 1). The Region of the Americas accounted for 47% of all new cases and 42% of all new deaths globally in the past week. New cases and deaths remained high in the European Region, which accounted for 38% and 43% respectively, showing a slight decrease in new cases and a slight increase in new deaths. New cases and deaths continue to decline in the South-East Asia and Eastern Mediterranean regions. In the African Region, while both new cases and deaths remain low in absolute numbers, for the fourth week in a row, the Region is reporting the largest percentage increase globally in weekly reported case numbers and this week there was a further 13% increase in new cases and 28% increase in new deaths. In the Western Pacific Region, new cases remained comparable to the previous week, but new deaths rose by 10%. As we welcome the New Year, and look eagerly towards COVID-19 vaccination campaigns worldwide, the current epidemiological situation with near record numbers of new cases and deaths, makes it imperative to continue to adhere to safety measures to prevent further transmission and loss of life.

Figure 1: COVID-19 cases reported weekly by WHO Region, and global deaths, as of 3 January 2021**

Recent reports of different variants of SARS-CoV-2, the virus that causes COVID-19, have again raised interest in and concern about the impact of viral changes. In the last months, two different variants of SARS-CoV-2 have been reported to WHO as unusual public health events from the United Kingdom of Great Britain and Northern Ireland, referred to as VOC 202012/01, and the Republic of South Africa, named 501Y.V2. Preliminary epidemiologic, modelling, phylogenetic and clinical findings suggest that SARS-CoV-2 VOC 202012/01 has increased transmissibility, and preliminary data also indicates that there is no change in disease severity (as measured by length of hospitalization and 28-day case fatality), or occurrence of reinfection between variant cases compared to other SARS-CoV-2 viruses circulating in the United Kingdom. To date, outside of the United Kingdom, 40 countries across five of the six WHO regions have reported cases of VOC 202012/01, while outside of South Africa six countries, in two of the six WHO regions have reported cases of 501Y.V2. The authorities in both countries are conducting further epidemiological and virological investigations to further assess the transmissibility, severity, risk of reinfection and antibody response to these new variants, as well as potential impact on countermeasures, including diagnostics, therapeutics and vaccines.

In the past week, the five countries reporting the highest number of cases were the United States of America (with 1 325 424 cases, just under a third of global cases and unchanged from last week), the United Kingdom of Great Britain and Northern Ireland (343 784 cases, continuing last week's rapid increase with a 36% increase), Brazil (252 018 cases, an 11% decrease), the Russian Federation (186 539 cases, a 7% decrease) and India (136 115 cases, a 13% decrease).

Situation by WHO Region

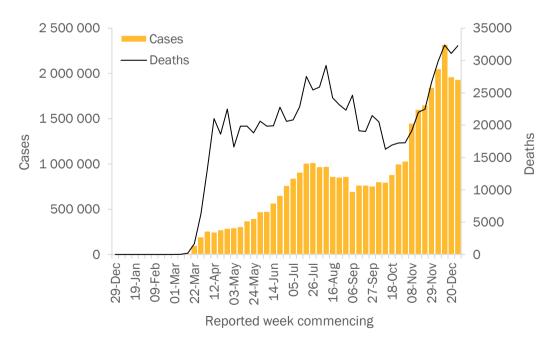

African Region

In the past week, over 130 000 new cases were reported in the African Region, a 13% increase compared to the previous week, and over 3000 deaths, a 4% increase over the previous week. In the past week, South Africa reported the highest number of new cases (93 978 new cases; 1585 new cases per 1 million population), Nigeria (5587 new cases; 27 new cases per 1 million), Mauritania (3393 new cases, 730 new cases per 1 million) and Namibia (3256 new cases, 1281 new cases per 1 million). The highest numbers of new deaths were reported from South Africa (2654 new deaths; 45 new deaths per 1 million), Mauritania (122 new deaths; 26 new deaths per 1 million) and the Kingdom of Eswatini (64 new deaths; 55 new deaths per 1 million).

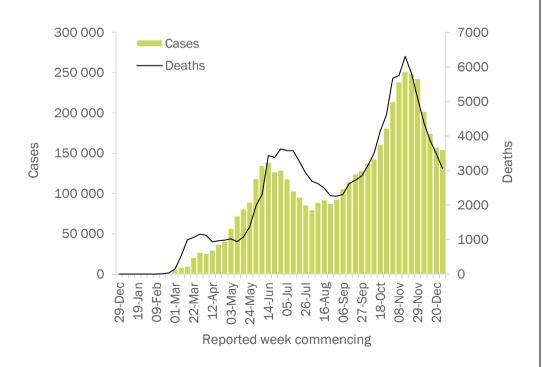

Region of the Americas

In the Region of the Americas, the number of new weekly cases remained at similar levels to last week with over 1.9 million new cases and 32 000 new deaths reported (a slight fall of 1% and rise of 3% respectively from last week). The highest new case counts were reported in the United States of America (1 325 424 new cases, 4004 new cases per 1 million), Brazil (252 018 new cases; 1186 new cases per 1 million) and Colombia (80 173 new cases, 1576 new cases per 1 million). The highest numbers of new deaths were reported from the United States of America (17 239new deaths; 52 new deaths per 1 million), Brazil (4923 new deaths; 23 new deaths per 1 million) and Mexico (4670 new deaths; 36 new deaths per 1 million).

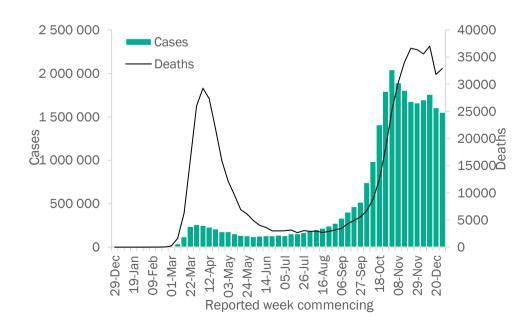

Eastern Mediterranean Region

In the past week, the Eastern Mediterranean Region reported over 154 000 new cases and over 3000 new deaths, a decrease of 1% and 12%, respectively compared to the previous week. Cases and deaths in the Region decreased for the sixth consecutive week. The highest number of new cases were reported from the Islamic Republic of Iran (42 511 new cases, 506 new cases per 1 million), Lebanon (16 936 new cases, 2841 new cases per 1 million) and Pakistan (14 880 new cases, 67 new cases per 1 million). These three countries accounted for almost half (48%) of new weekly cases in the Region. The highest number of new deaths were reported from the Islamic Republic of Iran (864 new deaths; 10 new deaths per 1 million), Pakistan (442 new deaths; 2 new deaths per 1 million) and Egypt (389 new deaths; 4 new deaths per 1 million).

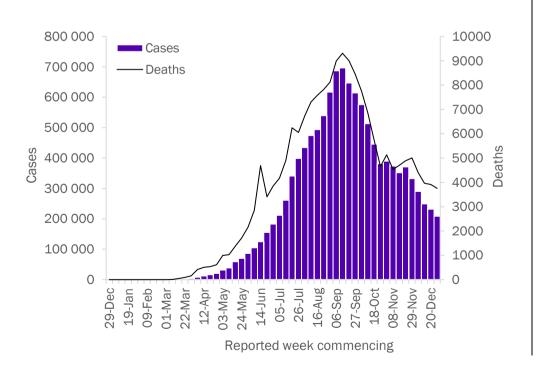

European Region

The European Region continues to report a large number of cases with over 1.5 million new cases and 3200 new deaths, a 3% decrease and 2% increase compared to the previous week, respectively. New weekly cases have decreased for the past two weeks. The Region reported the highest proportion (43%) of global new deaths among all regions. Last week, the countries reporting the highest number of new cases were the United Kingdom of Great Britain and Northern Ireland (343 784 new cases, 5064 new cases per 1 million), the Russian Federation (186 539 new cases; 1278 new cases per 1 million) and Germany (124 808 new cases; 1490 new cases per 1 million). The highest number of deaths were reported from Germany (4494 new deaths; 54 new deaths per 1 million), the United Kingdom (4165 new deaths; 61 new deaths per 1 million) and the Russian Federation (3728 new deaths; 26 new deaths per 1 million).

South-East Asia Region

New cases and deaths in the South-East Region have continued to decrease, a trend observed since early September. Just over 200 000 new cases and 3700 new deaths were reported this week, a 10% and 3% decrease respectively, compared to the previous week. The three countries reporting the highest number of new cases and new deaths were India (136 115 new cases; 99 new cases per 1 million; 1813 new deaths; 1 new death per 1 million), Indonesia (51 636 new cases; 189 new cases per 1 million; 1561 new deaths; 6 new deaths per 1 million) and Bangladesh (7085 new cases; 43 new cases per 1 million; 171 new deaths; 1 new death per 1 million). India has consistently reported the highest number of new cases and deaths since the end of the first week of April 2020.

Western Pacific Region

In the past week, there has been little change in the number of new cases (just under 53 000) reported in the Western Pacific Region, while new deaths increased by 10% (over 700) compared to the previous week. The plateau in new cases over the past week comes after four weeks of increasing trends. The three countries reporting the highest number of new cases this week were Japan (23 642 new cases; 187 new cases per 1 million), Malaysia (13 473 new cases; 416 new cases per 1 million) and Philippines (7911 new cases; 72 new cases per 1 million). The three countries reporting the greatest number of new deaths this week included Japan (335 new deaths; 3 new deaths per 1 million), Philippines (186 new deaths; 2 new deaths per 1 million) and the Republic of Korea (154 new deaths; 3 new deaths per 1 million).

Data, table and figure notes

Data presented are based on official laboratory-confirmed COVID-19 case and deaths reported to WHO by country/territories/areas, largely based upon WHO <u>case definitions</u> and <u>surveillance guidance</u>. While steps are taken to ensure accuracy and reliability, all data are subject to continuous verification and change, and caution must be taken when interpreting these data as several factors influence the counts presented, with variable underestimation of true case and death incidence, and variable delays to reflecting these data at global level. Case detection, inclusion criteria, testing strategies, reporting practices, and data cut-off and lag times differ between countries/territories/areas. A small number of countries/territories/areas report combined probable and laboratory-confirmed cases. Differences are to be expected between information products published by WHO, national public health authorities, and other sources. Due to public health authorities conducting data reconciliation exercises which remove large numbers of cases or deaths from their total counts, negative numbers may be displayed in the new cases/deaths columns as appropriate. When additional details become available that allow the subtractions to be suitably apportioned to previous days, graphics will be updated accordingly. See the log of major changes and errata for details. Prior situation reports will not be edited; see <u>covid19.who.int</u> for the most up-to-date data.

Global totals include 745 cases and 13 deaths reported from international conveyances.

The designations employed, and the presentation of these materials do not imply the expression of any opinion whatsoever on the part of WHO concerning the legal status of any country, territory or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate border lines for which there may not yet be full agreement. Countries, territories and areas are arranged under the administering WHO region. The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by WHO in preference to others of a similar nature that are not mentioned. Errors and omissions excepted, the names of proprietary products are distinguished by initial capital letters.

[1] All references to Kosovo should be understood to be in the context of the United Nations Security Council resolution 1244 (1999). In the map, number of cases of Serbia and Kosovo (UNSCR 1244, 1999) have been aggregated for visualization purposes.

¹ Excludes countries, territories, and areas that have never reported a confirmed COVID-19 case.

"Transmission classification is based on a process of country/territory/area self-reporting. Classifications are reviewed on a weekly basis and may be revised as new information becomes available. Differing degrees of transmission may be present within countries/territories/areas. For further information, please see:

Considerations for implementing and adjusting public health and social measures in the context of COVID-19:

- No (active) cases: No new cases detected for at least 28 days (two times the maximum incubation period), in the presence of a robust surveillance system. This implies a near-zero risk of infection for the general population.
- Imported / Sporadic cases: Cases detected in the past 14 days are all imported, sporadic (e.g. laboratory acquired or zoonotic) or are all linked to imported/sporadic cases, and there are no clear signals of further locally acquired transmission. This implies minimal risk of infection for the general population.
- Clusters of cases: Cases detected in the past 14 days are predominantly limited to well-defined clusters that
 are not directly linked to imported cases, but which are all linked by time, geographic location and common
 exposures. It is assumed that there are a number of unidentified cases in the area. This implies a low risk of
 infection to others in the wider community if exposure to these clusters is avoided.
- Community transmission: Which encompasses a range of levels from low to very high incidence, as described below and informed by a series of indicators described in the aforementioned guidance. As these subcategorization are not currently collated at the global level, but rather intended for use by national and sub-national public health authorities for local decision-making, community transmission has not been disaggregated in this information product.
 - CT1: Low incidence of locally acquired, widely dispersed cases detected in the past 14 days, with many of the cases not linked to specific clusters; transmission may be focused in certain population sub-groups.
 Low risk of infection for the general population.
 - CT2: Moderate incidence of locally acquired, widely dispersed cases detected in the past 14 days;
 transmission less focused in certain population sub-groups. Moderate risk of infection for the general population.
 - CT3: High incidence of locally acquired, widely dispersed cases in the past 14 days; transmission widespread and not focused in population sub-groups. High risk of infection for the general population.
 - CT4: Very high incidence of locally acquired, widely dispersed cases in the past 14 days. Very high risk of infection for the general population.
- Pending: transmission classification has not been reported to WHO.

[&]quot;Territories" include territories, areas, overseas dependencies and other jurisdictions of similar status.
