

#### ZAMBIA SITUATION REPORT NO. 34

Disease Outbreak: COVID-19Response start date: 30<sup>th</sup> January, 2020Outbreak Declared: 18<sup>th</sup> March, 2020Date of report: 21<sup>st</sup> April, 2020Prepared by: MOH/ZNPHI/WHOCorrespondence: ims.covid@znphi.co.zm

## **SITUATION UPDATE**

## **1.1 CURRENT CASE NUMBERS**

- ► As of 17:00 hours on Tuesday, 21<sup>st</sup> April, 2020:
  - There were **5 new confirmed cases of COVID-19, no recoveries and no deaths** recorded in the past 24 hours.
  - The total number of confirmed cases recorded to date is 70, with
    3 deaths (CFR=4.29%) and 35 recoveries (Refer to Annex 1).
  - There are currently 32 active cases; 29 in Lusaka, 2 on the Copperbelt and 1 in Kabwe. All cases (suspected/confirmed) are admitted to designated isolation facilities.

#### 1. EPIDEMIOLOGICAL HIGHLIGHTS

#### Table 1: COVID-19 Summary surveillance and case management, based on 21st April 2020 report

#### **Parameter** Number Cumulative number of high risk persons under observation 9,494 Cumulative number of high risk persons that have completed 14 days observation 2.669 Cumulative number of alerts notified & verified as non-cases 870 Number of suspected cases reported 4 **Cumulative Number of Samples Received** 4,040 **Total Number of Results Processed** 3,715 **Total Number of Confirmed COVID-19 Positive Cases** 70 Total number of currently isolated positive cases 32

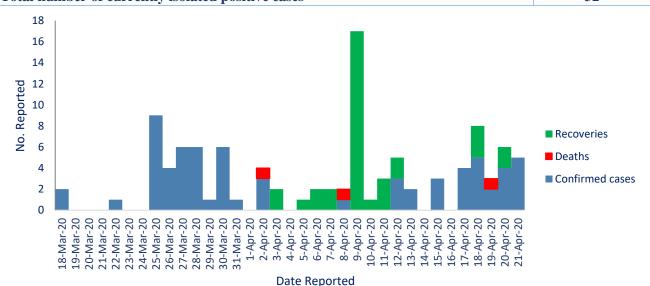

Figure 1: Epi-curve of COVID-19 confirmed cases (N=70), deaths (N=3) and recoveries (N=35) as of 21<sup>st</sup> April 2020

#### Zambia Numbers

- **70** Confirmed (5 new)
- **3** Deaths (0 new)
- **35** Recoveries (0 new)

#### **Global Numbers**

- (Source: JHU) **2,544,769** confirmed (96,849 new)
- **175,621** deaths (7,121 new)
- **678,479** Recoveries (35,234 new) \**New: in the last 24hrs*

#### Table 2: Summary of COVID-19 cases recorded country-wide as of 21st April 2020

Age and Sex distribution: Of confirmed cases 62% are male and 38% are female. The most affected age group remains those aged between 15-30 years old, with 35% of the confirmed cases falling in this age bracket, followed by the 31-44 age group (24%) and 45-60 age group (22%).

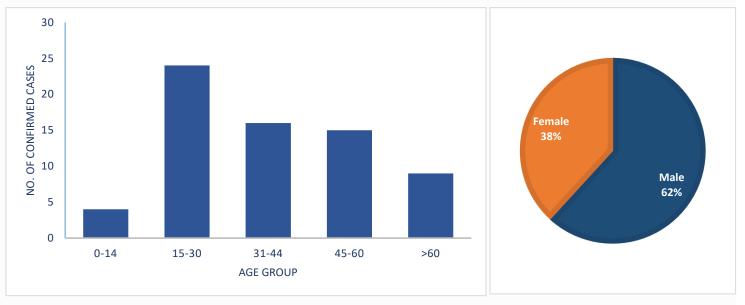

Figure 4: Age and Sex distribution of confirmed cases, as of 20th April 2020

#### > ACTIONS TO DATE

#### **2.1 CO-ORDINATION**

- Regional/Continental level: Zambia hosts the Southern Africa Regional Collaborating Centre of the Africa CDC and has been coordinating the response at regional level. To date, Southern Africa has recorded 3,525 confirmed cases of COVID-19 including 70 deaths and 969 recoveries. Zambia continues to participate in AU meetings to ensure continued regional and continental trade and strategies to stop transmission of COVID-19.
- Policy Level: The government continues to enforce the measures and interventions to control the spread of COVID-19 countrywide as outlined in the Statutory instruments SI21 and SI22 of 2020 on COVID-19 and presidential directives issued in March 2020. The measures include wearing of a mask while out in public; continued screening of travellers into Zambia; redirection of all international flights to land and depart from KKIA only; suspension of non-essential travel to countries with confirmed COVID-19 cases; restriction of public gatherings; restaurants to operate only on take away and delivery basis; and closure of all bars, nightclubs, cinemas, gyms and casinos. Following continued disregard of quarantine directives, travellers into Zambia will now be isolated at designated facilities at own cost while awaiting test results.
  - Meetings of the Committee of Ministers, Committee of Permanent Secretaries, and the National Epidemic Preparedness, Prevention Control and Management Committee (NEPPC&MC) have been convened since the declaration of the outbreak
  - Press briefings are held daily on the evolving outbreak situation in Zambia.
- **Technical level:** The ZNPHI continues to provide leadership and partner collaboration on the response.
  - The IMS continues to meet at the ZNPHI (with a Zoom link provided to ensure social distancing) on Tuesdays and Thursdays. (Refer to Annex 2 for structure)
  - Technical co-ordinating meetings are being held with cooperating partners and other stakeholders. The meetings are chaired by the Director, ZNPH
  - All the response pillars under the IMS have an Incident Coordinator whose responsibility it is to map the partners and resources for the respective units to ensure no duplication of efforts and resources. Public Health Specialists in each of the sub-districts in Lusaka serve as Incident Commanders and coordinate daily activities of field teams.

## **2.2 SURVEILLANCE**

Surveillance is being actively conducted around the country at community level, health facilities, points of entry (POEs), and sentinel sites. Efforts for rapid detection of any cases of COVID-19 in Lusaka, Kabwe and Kafue continue including testing, contact tracing, monitoring of persons under quarantine and adherence, verification and follow up of alerts and timely transport of cases to isolation facilities. Sub-district teams continue to carry out quarantine adherence monitoring, follow up of confirmed cases, contact tracing, follow up and verification of alerts, and risk communication

- Case finding: All of the 5 new confirmed cases are health workers from the Levy Mwanawasa isolation facility. This brings the total number of health workers infected to eight (8). The profile of the cases reported is as follows: 23-year-old male; 47-year-old female; 28-year-old female; 25-year-old female; and 32-year-old female. They have been admitted at the Courtyard isolation facility.
- Contact Tracing: Investigations to trace and screen all contacts remain in effect. Rapid response teams in Kabwe, Kafue and Lusaka continue to conduct mass screening and contact tracing. Surveillance teams also continue to actively follow up contacts of confirmed cases and community alerts.

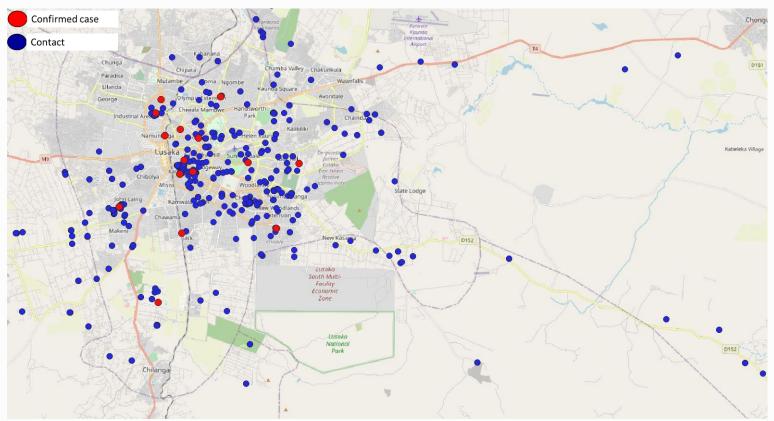

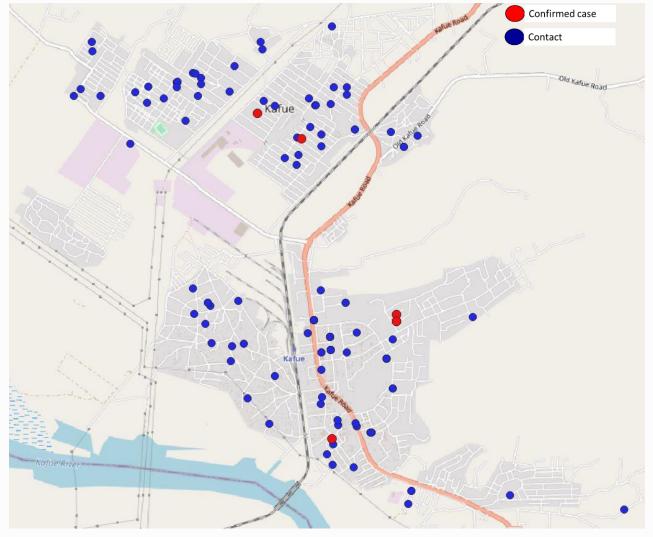

Figure 5: Distribution of confirmed cases and traced contacts in Lusaka, last updated 20<sup>th</sup> April 202

*Figure 6: Distribution of confirmed cases and traced contacts in Kafue, last updated 20<sup>th</sup> April 2020* 

- Points of Entry: Active screening continues in all PoEs. Trucks entering the borders carrying essential commodities proceed to their destination under secure escort, at which point the drivers are placed under quarantine pending test results
- Laboratory: There are currently 3 designated laboratories for COVID-19 diagnostics, namely the University Teaching Hospital Virology Lab (UTHVL) (WHO-certified National Influenza Centre), the School of Veterinary Medicine (SVM), UNZA and the Tropical Diseases Research Centre (TDRC) on the Copperbelt. A sample referral system is in place for samples being collected in other provinces. Zambia is utilising Polymerase Chain Reaction (PCR) testing for COVID-19 diagnosis. Some rapid diagnostic testing (RDT) has been conducted using a total antibody test (IgM and IgG). The RDT has an 86.43% sensitivity and 99.57% specificity. However, preliminary data has shown that there is a higher likelihood of false positives and false negatives within the first 3-5 days of infection; sensitivity does

increase by day 8. Therefore, results from the RDT results have to undergo confirmatory testing with PCR.

- In the last 24 hours, 479 PCR tests were conducted; five (5) of which were positive. A total of 4,040 samples have been received to date; of these, 3,715 results have been processed with 70 confirmed positive for SARS-CoV-2. Summary of tests conducted to date is available in Annex1
- The standard turn-around time for the PCR test is 24 hours, but can take up to 36-48 hours where repeat or confirmatory testing is required
- Testing of community alerts, suspects under quarantine, contacts of confirmed cases as well as retesting of confirmed cases is ongoing.
- **Criteria for testing:** individuals who meet the case definition or individuals who have had contact/been exposed to a confirmed positive case and/or are symptomatic. Testing is being expanded in all communities with confirmed cases.

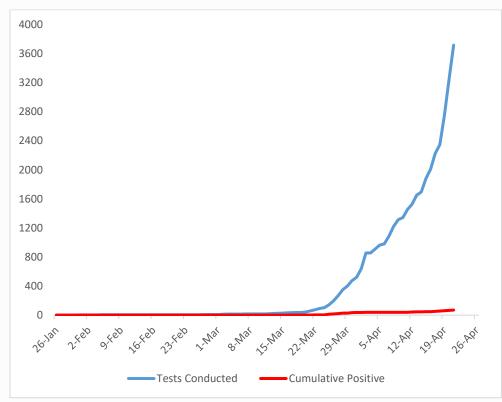

Figure 7: Graph showing cumulative number of PCR tests conducted vs confirmed cases as of 21st April 2020

Case Management: All symptomatic cases (suspected, probable and confirmed) are admitted to the designated isolation facilities. *Patients are only considered recovered once they record two negative retest results within a 24hour period*. Refer to Annex 1 for detailed summary. Additionally, all health workers are required to undergo 14-day quarantine following their shift at the isolation facilities before

they return to their communities. There are currently **32 active COVID-19 cases** being managed at various facilities.

- Levy Mwanawasa Hospital: In the last 24 hours, the facility had no new admissions of confirmed cases. There are currently 21 patients admitted at the facility (all confirmed positive). All patients are stable.
- **Courtyard facility**: In the last 24 hours, the facility had 5 new admissions of confirmed cases. There are currently 8 patients admitted at the facility (all confirmed positive). All patients are stable
- Masaiti District Hospital: In the last 24 hours, the facility had no new admissions of confirmed cases; no recoveries were recorded. There are 2 confirmed positive cases still admitted; all patients are in a stable condition.
- Kabwe Mother, New-born and Children's Hospital: In the last 24 hours, the facility had no new admissions; there is currently 1 confirmed case admitted.
- **COVID-19 Screening Facilities:** Dedicated screening structures have been set up at the UTH and Levy Mwanawasa, away from the areas of routine service delivery.
- **Isolation facilities** have also been set up in all high risk districts across the ten provinces; a detailed list is available at Annex 4

## 3. GAPS AND CHALLENGES

- Surveillance and outbreak investigation: non-adherence to self-quarantine and socio-distancing
- Risk Communication: continued myths and misconceptions in the community including fear regarding tainted swabs and perception that COVID-19 only affects affluent populations
- > **POEs:** highly porous borders

#### 4. PRIORITY ACTIONS AND RECOMMENDATIONS

- Laboratory: PCR testing of persons identified through serological screening of high risk communities in Kafue; commissioning of new freezers for COVID 19 samples
- Surveillance and outbreak investigation: Mass screening and contact screening in Kafue, Lusaka and Kabwe; continued active case finding, monitoring of quarantined persons and responding to community alerts country wide.
- RCCE: Intensified activities in affected provinces and sustained preparedness in other provinces; continued radio/television discussion programmes and announcements; continued review of IEC materials as the outbreak evolves
- > **POEs:** continued active screening at all POEs

## **5. CONCLUSION**

In the last 24 hours, Zambia recorded 5 new confirmed cases of COVID-19, all among health workers at the frontline. The government has directed that IPC measures in health facilities must be reinforced in order to protect frontline health workers. These include reorientation of all staff in IPC practices, designated senior members of staff assigned to enforce IPC compliance, increased stock of PPE to guarantee availability for all staff, and additional manpower assigned to ensure disinfection of all surfaces.

# ANNEX 1: EPIDEMIOLOGICAL DATA AS OF 17:00HRS ON 21st APRIL 2020<sup>\*</sup>

#### ANNEX 2: NATIONAL LEVEL INCIDENT MANAGEMENT SYSTEM FOR THE COVID-19 PREPAREDNESS RESPONSE

#### ANNEX 3: CORONAVIRUS DISEASE 2019 (COVID-19) CASE DEFINITIONS

## **Case Definitions**

## **<u>1. Suspect case</u>:**

A. Patient with acute respiratory infection (fever and at least one sign/symptom of respiratory disease e.g. cough, shortness of breath), AND with no other aetiology that fully explains the clinical presentation AND a history of travel to or residence in a country/area or territory reporting local transmission of COVID-19 during the 14 days prior to symptom onset,

# OR

B. Patient with any acute respiratory illness AND having been in contact with a confirmed or probable COVID-19 case in the last 14 days prior to symptom onset,

# OR

C. Patient with severe acute respiratory infection (fever and at least one sign/symptom of respiratory disease e.g. cough, shortness of breath), AND requiring hospitalization AND with no other aetiology that fully explains the clinical presentation

**<u>2. Probable case</u>**: A suspect case for whom testing for COVID-19 is inconclusive or is tested positive using a pan-coronavirus assay and without laboratory evidence of other respiratory pathogens.

3. Confirmed case: A person with laboratory confirmation of COVID-19 infection, irrespective of clinical signs and symptoms.

**<u>4. Person Under Investigation</u>**: a suspected case, irrespective of admission status, with either history of travel to an area with local transmission or worked in/attended a health care facility treating COVID-19 infections or admission to a facility for severe pneumonia of unknown aetiology

**5.** Contact: a person who experienced any one of the following exposures during the 2 days before and the 14 days after the onset of symptoms of a probable or confirmed case: a. Face-to-face contact with a probable or confirmed case within 1 meter and for more than 15 minutes; b. Direct physical contact with a probable or confirmed case; c. Direct care for a patient with probable or confirmed COVID-19 disease without using proper personal protective equipment; OR d. Other situations as indicated by local risk assessments.

## ANNEX 4: LIST OF DESIGNATED ISOLATION FACILITIES FOR THE COVID-19 OUTBREAK RESPONSE

PROVINCE	DISTRICT	ISOLATION FACILITY		Lusangazi	Ukwimi Trades
Eastern		Walera HP and Chipata	Southern	Livingstone	Mosi Oa Tunya Health
